

## Providing Geophysical Solutions for Marcellus Shale Operators

In the heart of the Marcellus Shale there is a company that has the capabilities to meet your project goals with minimal cost and environmental impact, that company is ARM Geophysics. We have the local experience and capabilities to manage your seismic data acquisition project from survey design to data interpretation.

AHV-IV Vibrators at work in Pennsylvania

Corporate headquarters are in Hershey, Pennsylvania. Formed in 1998 we are the only locally based Geophysical Company with a full time staff of engineers, geologists and geophysicists. We have the depth and range of geophysical experience to provide high resolution 2D and 3D surveys, integrated data processing, geologic modeling and interpretation.

ARM Geophysics has dedicated teams to handle project tasks including, survey design and planning, permitting, surveying, systems and technology integration, field data acquisition, data processing, geophysical/geologic mapping and modeling. A diverse set of capabilities with the application of geophysics and geologic characterization techniques for petroleum exploration and exploitation. ARM Geophysics uses the latest in recording and energy source technology. Wired or wireless recording technology and experience together with Vibroseis, AXIS or dynamite capabilities.

HSE. Arm Geophysics is committed to safety as well as environmental protection and safeguards. ARM has an

# Let ARM Geophysics Manage Your Next Survey

ARM Geophysics can design and execute your next seismic survey. The experience of our staff in the Marcellus Shale is unrivaled in the Geophysical Industry. Our team of geologists, geophysicists and operation managers ensure that your seismic survey will not only meet your objectives, but also come in on time and on budget. ARM Geophysics directs the logistical, technical and field issues involved with acquiring your seismic survey. We provide in house services for all aspects of your project to guarantee the best quality service and data.
